

System Vulnerability Checklist

DecodeLabs Cyber Security Internship

Project 4

Name: Zainab

Objective

The objective of this project is to identify basic security vulnerabilities in a computer system by checking password security, software update status, firewall protection, antivirus status, and user security practices. The project also provides recommendations to improve system security.

Security Checklist

Security Check	Status
Login Password	No
Windows Updates	No
Antivirus Protection	Yes
Firewall Protection	Yes
Safe User Practices	Yes

Findings

Findings 1: No Login Password

Status: Vulnerability Found

Description:

No login password is configured on the system.

Risk: Unauthorized users can access the computer and its data.

Findings 2: Windows Updates Missing

Status: Vulnerability Found

Description:

The Windows version has reached the end of support and important security updates are missing.

Risk: The system may be exposed to security threats and vulnerabilities.

Findings 3: User Security Awareness

Status: Acceptable

Description:

Basic safe browsing practices are followed

Risk: Low Risk

Findings 4: Cloud Protection Disabled

Status: Vulnerability Found

Description:

Cloud-delivered protection is turned off in Windows Security.

Risk: The system may not receive real-time cloud-based threat intelligence and protection

Screenshots Evidence

Figure 1: Windows Update Status

Windows Update

Your version of Windows has reached the end of support
Your device is no longer receiving security updates. [Learn about the end of support](#)

Your device is missing important security and quality fixes.

Check for updates

[View optional updates](#)

Enroll in Extended Security Updates

Your device is no longer receiving security updates. Enroll now to stay protected and productive for another year.

[Enroll now](#) [Learn about the end of support](#)

Get the latest updates as soon as they're available

Be among the first to get the latest non-security updates, fixes, and improvements as they roll out. [Learn more](#)

Off

Observation: Windows version has reached end of support and security updates are missing.

Figure 2: Antivirus Status

Virus & threat protection

Protection for your device against threats.

Current threats

No current threats.

Last scan: 9/19/2026 10:51 PM (quick scan)

0 threats found.

Scan lasted 2 minutes 37 seconds

11578 files scanned.

Quick scan

[Scan options](#)

[Allowed threats](#)

[Protection history](#)

Virus & threat protection settings

Cloud-delivered protection is off. Your device may be vulnerable.

Turn on

Observation:

Antivirus status is enabled and no current threats were detected.

Figure 3: Firewall Status

Firewall & network protection

Who and what can access your networks.

Domain network

Firewall is on.

Private network

Firewall is on.

Public network (active)

Firewall is on.

Observation:

Firewall protection is enabled.

Recommendations

1. Configure a strong login password.
2. Install the latest Windows security updates.
3. Enable automatic updates.
4. Keep antivirus software updated.
5. Keep firewall protection enabled.
6. Avoid downloading files from untrusted sources.
7. Follow safe browsing practices.

Conclusion

The project helped identify basic security vulnerabilities in the system. The assessment found that no login password is configured and important Windows security updates are missing. Antivirus and firewall protection were enabled. Implementing the recommended security measures can improve the overall security of the system.
